RATING RATIONALE

Our 'BBB' long-term issuer rating on Sweden-based community service property manager Intea Fastigheter AB (publ) (Intea) reflects the company's low-risk portfolio of largely custom-built properties and its generally long contracts with highly creditworthy public-sector authorities in the education, law enforcement and healthcare sectors. The rating also reflects the company's strong operating environment, stable cash flows and healthy profitability. We view the company's solid owners and long fixed-interest periods as credit strengths.

These benefits are offset by Intea's overall financial risk profile, with higher net loan to value (LTV), and a front-loaded debt maturity profile resulting in a weaker liquidity profile than that of its investment grade peers. We view the company's relatively high project exposure, modest size, high portfolio concentrations and restricted geographic scope, with concentration risk in certain municipalities, as negative.

STABLE OUTLOOK

The stable outlook reflects our expectation that Intea's net interest coverage is likely to remain comfortably within our rating requirements over our forecast period through 2027 and that property values will remain robust. It also reflects our expectation that the company will continue to have strong access to capital markets and will not make changes to its low-risk business profile by broadening project development exposure.

POTENTIAL POSITIVE RATING DRIVERS

- Improved credit metrics, with a net LTV ratio below 50%, net debt to EBITDA below 10x and net interest coverage above 3x over an extended period; and
- Improved debt maturity and liquidity profile; and
- Significantly reduced property concentration and lower project development exposure.

POTENTIAL NEGATIVE RATING DRIVERS

- Net LTV above 55.0% and net interest coverage below 2.2x over a protracted period.
- Increased project development exposure without improving liquidity management and long-term capital structure.
- Negative change in financial risk management or change in risk tolerance.

ISSUER PROFILE

Intea is a Sweden-based property manager focused on highly specialised, purpose-built community service properties, primarily in urban centres in southern Sweden. About 95% of the company's rental income comes from agencies of the Swedish government and municipalities. Intea was founded in 2015 with support from pension foundations associated with, among others, Svenska Handelsbanken AB, SAAB AB and AB Volvo. Since end-2024, the company is listed on the Stockholm Stock Exchange with most shares controlled by the company's founders and founding institutions.

BUSINESS RISK ASSESSMENT

Business risk assessment

Operating environment

Our business risk assessment reflects Intea's strong position in the specialised community service property market, its low-risk property portfolio and strong operating efficiency. It also reflects the company's long-term ownership, high proportion of government-supported tenants, long lease terms and high occupancy rates. Our assessment also considers Intea's highly concentrated tenant composition and limited scale, diversity and scope for alternative use of the company's properties.

Highly creditworthy tenants and strong market fundamentals support operating environment

Intea operates in the Swedish community service property market, with most of its revenue coming from government-related bodies. The sector has undergone a structural shift in recent years, and about 25% of public-sector tenant properties are now owned by private companies. An increasing number of Swedish municipalities are heavily debt-laden with limited possibilities of increasing tax revenues to meet investment needs. These conditions support transfer of ownership to private-sector property managers. The appropriateness of private ownership of public infrastructure has been debated, due to surging inflation and lease indexation. We assess the political risk of private ownership as minor, given our belief that the government and municipalities are not equipped to sufficiently expand social infrastructure to meet current demographic challenges and social trends. We expect the operating environment to remain stable.

Intea caters mainly to providers of essential public services. The company seeks to earn at least 90% of its rental income from public-sector tenants, a figure it has continuously surpassed. The market for highly customised premises deters new entrants, as it is clearly imprudent to build such properties on a speculative basis. Limitations on alternative uses constrain property substitution and help underpin Intea's strong position in its operating areas (see Figure 2).

Figure 2. Rental income by location, 31 Mar. 2025

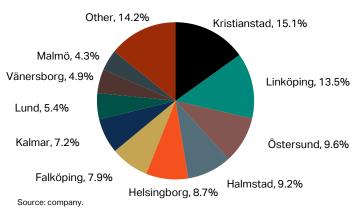

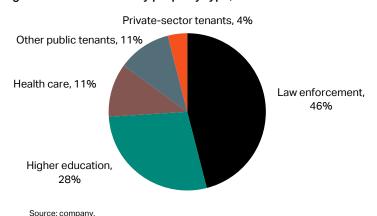

Figure 3. Rental income by property type, 31 Mar. 2025

Demographic trends such as increasing numbers of elderly people and general population growth increase the need for critical social infrastructure. The number of enrolled students in higher education is also projected to increase following higher requirements within the job market. Rising demand for higher education and healthcare services, along with community service properties in need of upgrades, are key drivers in the niche areas that Intea serves. The number of citizens above the age of 65 years is projected to increase by 26% between year-end 2024 and 2045 in the locations in which Intea operates, driving an underlying need for healthcare facilities.

Source: company, Statistics Sweden and the Swedish Public Employment Service.

The need for law enforcement services is also increasing; Swedish prisons are at maximum capacity, while levels of processed crimes and probationary sentences are likely to increase (see Figure 5). The Swedish government has increased resources for authorities within law enforcement and intensified efforts to combat criminality. The number of places in jails and prisons are estimated to increase threefold from current levels by 2033.

Figure 5. Swedish crime statistics, 2018-2028e

Strong market position constrained by high concentrations

As of 31 Mar. 2025, Intea's property portfolio covered 18 municipalities and comprised 43 properties valued at SEK 24.1bn, with a combined lettable area of 596,000sqm. The company is one of few companies in Sweden that solely manage community service properties. Intea's focus on highly specialised properties with relatively low substitution risk results in a favourable market position.

Favourable demographic trends, along with high demand for newer facilities from government-backed entities, have resulted in the significant development of Intea's project portfolio, which is the company's main source of growth. We expect the company to benefit from its niche position as the preferred partner for new-build properties.

Figure 6. Intea peer group breakdown by property value and lettable area, 31 Mar. 2025

Because most of Intea's properties are custom-built for specific tenants, we expect greater-than-average customer loyalty, with contracts likely to be extended on expiry. However, should contracts be terminated, we would expect Intea to incur significant adaption costs for accommodating new tenants. The high degree of specialisation has resulted in a concentrated revenue stream, with the 10 largest tenants and 10 largest properties representing 77.4% and 70.3% of rental income, respectively, as of 31 Mar. 2025. We take a negative view of the company's property concentration and low number of properties as this increases the impact of potential vacancies or other adverse events. However, we believe the vital social functions provided by tenants and favourable societal trends contribute to low relocation risk. We consider that the company's strong government-backed tenants on long contracts offset the risk associated with having limited tenant diversity.

Figure 7. Tenant concentration, 31 Mar. 2025

Large share of projects offsets attractive portfolio with long remaining lease terms

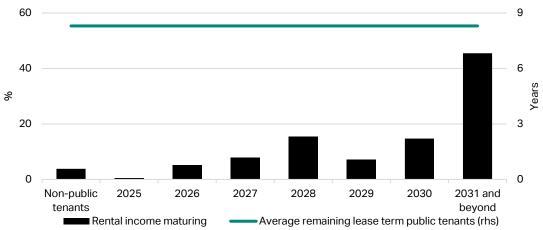

Intea's property portfolio is mostly custom-built for specialist, long-term single tenants, which reduces turnover. The properties are mostly located in attractive urban centres in southern Sweden. The company's average property size is much larger than its closest peers such as Vacse AB and Fastighets AB Stenvalvet. This is mainly due to Intea's large university properties. Its largest single property is Intea Garnisonen in Linköping, a former military facility converted into multiple-use civilian buildings with a combined area of 86,000sqm.

As of 31 Mar. 2025, Intea had a long average remaining lease term of 8.1 years and generally well-diversified maturities. The company's 10 largest contracts generate about 42% of total rental income. Among these contracts, the average lease maturity is 11.4 years, which reduces vacancy risk, given the strong counterparties. We view the likelihood of tenant turnover as low, as most of Intea's properties

Portfolio assessment

are purpose-built and highly specialised, in line with tenant demand. In addition, operational inertia is high among most of Intea's tenants, making them less likely to relocate. Intea's contracts have long notice periods for if a tenant wishes to relocate, providing it with considerable flexibility in finding a new tenant if the need arises. Overall, we assess Intea's lease maturity profile as positive for stability.

Figure 8. Lease maturity profile, 31 Mar. 2025

Source: company.

In our view, Intea's project property portfolio carries lower than average development risk due to it only engaging in fully pre-let projects with a large proportion of yield-based contracts, often with development carried out in collaboration with tenants. The project portfolio is an integral component of Intea's business. Most of the company's ongoing projects are scheduled to be finalised in 2025. We expect the company will start construction of some projects and continue to add new projects to its pipeline over our forecast period.

Project risk is limited and mostly borne by the contractor, resulting in relatively low risk in the development portfolio. Nevertheless, we regard the relatively large scale of the development portfolio as negative, as it increases risk to cash flow and debt maturity profiles.

Figure 9. Selection of projects in progress, 31 Mar. 2025

Finalisation of projects set to improve net operating margins

Operating efficiency

Intea's operating efficiency is characterised by the company's long inflation-linked leases, with some ancillary costs passed onto tenants, close to a 100% occupancy rate and good cost control. The company's net operating income and EBITDA margins improved steadily as it increased in scale, acquired properties and finalised construction of properties with high margins on attractive contract terms. Our forecast of Intea's financial ratios assumes that net operating margins will improve toward 86% with an EBITDA margin over 80% by end-2027 due to a larger share of properties with high margins in the portfolio.

In our view, Intea's rental income streams carry limited downside risk due to low correlation with the economic cycle. The customised property portfolio with long-term leases contributes to negligible tenant turnover and high, stable occupancy rates.

Figure 10. Revenues, net operating income, EBITDA, and margins, 2021-2027e

Source: company and NCR estimates. e-estimate.

FINANCIAL RISK ASSESSMENT

Our financial risk assessment reflects Intea's moderately strong interest coverage and moderately high net LTV. It also reflects the company's financial risk management, with relatively long fixed-interest arrangements and high revenue visibility with limited downside risk. In our view, the company's front-loaded debt maturity profile and liquidity profile are weaker than that of its investment grade peers. We believe the company's large pool of unencumbered assets and fixed-interest arrangement provide financial flexibility that somewhat offset the risk of its debt maturity profile.

Net LTV restored and interest coverage ratio set to rebound due to improved cash flow

We expect that Intea will expand through its committed project development pipeline, with larger projects scheduled for finalisation in 2025. The company raised SEK 2bn in an initial public offering (IPO) in the fourth quarter of 2024, resulting in its net LTV being reduced to 50.5% from 57.9% in the third quarter. Our forecast sees the company's net LTV trending towards the upper end of its long-term policy targets of 50-55% by end-2027 as we expect capital expenditure totalling SEK 7.1bn over 2025—2027. We believe that property values will remain robust with some positive fair value changes associated with the project portfolio due to the healthy yield gap of those assets.

We believe Intea's financing costs are approaching their peak and are at long-term sustainable levels due to a large proportion of fixed-interest arrangements and lower spreads on the company's capital market financing. We expect these factors, together with higher cash flows from the operating portfolio, to result in a strong rebound in the company's interest coverage in 2025. We expect the expiry of some low-interest swaps in 2026—2027 to result in average interest rates increasing to 3.2% in 2027.

Figure 11. Base case forecast key assumptions and credit metrics, 2025–2027e

Financial risk assessment

Ratio analysis

Figure 12. Investment properties, net debt and net LTV, 2021- Figure 13. Net debt/EBITDA and EBITDA/net interest, 2021-2027e

Risk appetite

Risk appetite supported by large pool of unencumbered assets and long interest-fixing

We expect Intea to operate within its policy-stipulated LTV target of 50-55% following its IPO in the fourth quarter of 2024 and that the company's ownership structure will keep risk tolerance at moderate levels. The company is mainly funded with senior unsecured debt, resulting in comparatively low asset encumbrance. This increases the company's financial flexibility and acts as an alternative source of liquidity should the need arise. Our overall financial risk assessment is underpinned by our expectations of low income volatility and long fixed-interest arrangements offering protection against higher interest rates.

Intea finances its operations through a mix of common equity, secured bank debt, senior unsecured bonds and commercial paper. The company mainly finances itself through debt capital markets, with senior unsecured bonds and commercial paper representing the main source of financing.

Figure 14. Funding profile, 31 Mar. 2025

Source: company.

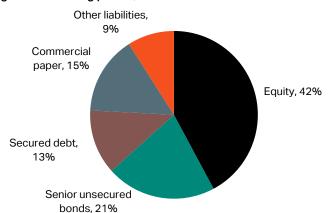

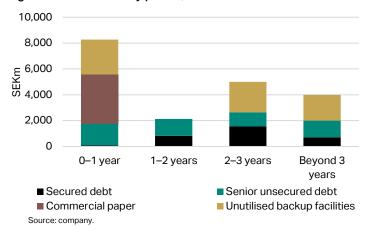

Figure 15. Debt maturity profile, 31 Mar. 2025

As of 31 Mar. 2025, the company's average debt maturity was 2.3 years, with 45% of debt due to mature within the next 12 months (see Figure 15). We expect the company's debt maturity profile to become less front-loaded as financing costs at longer maturities have become more accessible. We see refinancing risk as limited since Intea is proactive in refinancing its upcoming maturities. The commercial paper programme, which is a large contributor to the short debt maturity profile, is fully backed by unutilised credit facilities at different maturities. We see the company's liquidity profile as weaker than that of its investment grade peers, which typically have committed sources of liquidity in excess of expected cash outflows. In our view, the large share of unencumbered assets acting as alternative sources of liquidity offset some risk associated with its front-loaded debt maturity structure.

In our view, the company's reliance on short-term financing of long-term assets increases its sensitivity to rising interest rates. As of 31 Mar. 2025, Intea's average interest rate was 2.8%, with nominal floatingrate hedges of SEK 12.8bn and a long average fixed-interest period of 4.6 years, which we regard as important for stability and limits sensitivity to changes in market rates. We believe the company faces

limited downside risk to financial ratios due to its strong counterparties and projects typically being carried out on yield-based contracts. The company has, however, comparatively low cash flow retention as it aims to pay dividends amounting to 30–50% of income from property management and has large project-related outflows.

ADJUSTMENT FACTORS

Adjustment factors are assessed as neutral and have no effect on the rating.

Liquidity

Our 12-month liquidity analysis is based on a stressed scenario in which the company cannot access the capital markets or extend bank loans, and therefore has to rely on internal or committed external funding sources to cover its liquidity needs. We typically expect a company with an investment grade rating ('BBB-' or above) to cover its liquidity needs, with limited need for external funding over the coming 12 months.

We view Intea's liquidity profile as neutral, despite uses exceeding funding sources over the 12 months ending 31 Mar. 2026. This is because we expect Intea to refinance its debt maturities successfully and proactively lengthen its debt maturity profile due to its satisfactory access to the capital markets and good banking relationships. We see the large pool of unencumbered assets as positive, acting as an alternative source of liquidity. We expect the company to seek additional funding for its committed project development portfolio and to meet its maturing debt. Our liquidity analysis does not include future acquisitions or uncommitted development projects.

Environmental, social and governance factors

Intea's environmental, social and governance (ESG) policies support our view of the company's overall business risk and competitive position. The company is implicitly bound by Swedish government ESG practices and carries out annual internal materiality assessments and engages in dialogue with

Adjustment factors neutral

Liquidity adequate

ESG factors adequate

stakeholders to understand their needs. Intea has a green financing framework and performed a double materiality analysis, identifying two categories that represent a risk to the company's financial impact: climate change and circular economy (which mainly relates to resource use in new builds).

Intea has a pronounced focus on reducing its carbon dioxide emissions through improving energy efficiency and becoming a self-sufficient producer of electricity. The company has a portfolio of hydropower assets and other energy-related assets with total generation of 17 gigawatt hours (GWh) and was 93% self-sufficient in energy as of year-end 2024. We expect Intea to grow its renewable electricity production to match the consumption in its property portfolio, acting as a natural hedge against electricity prices, which we see as beneficial for its cost control.

Intea intends to obtain environmental certifications for all newly constructed properties and has intensified its sustainability efforts, which we believe could increase the company's share of green funding. The company aims to achieve BREEAM Excellent environmental certification or corresponding certification for all new builds. In our view, certifications increase a property's attractiveness, facilitating renegotiations of contracts and enabling more cost-efficient property management.

The main ESG issues that could impact our overall assessment are factors that could contribute to revenue losses, cost increases, higher capital spending or deteriorating financing terms (see Figure 18).

Figure 18. Intea ESG considerations

Issue	Risk	Mitigating efforts	Result
Carbon dioxide emissions	Increased costs due to regulatory and/or taxation changes	Efforts to increase energy efficiency and reduce carbon dioxide emissions. Environmental certification of properties.	Targets below 874 tonnes of carbon dioxide equivalents by 2030 (reduced by 50% from base year 2019). Carbon dioxide equivalents increased to 1,981 tonnes in 2024 from 1,390 in 2023.
Impact of climate change on operations	Loss of revenues or increased capital spending	Environmental certification of properties, materiality evaluations, technical solutions, tenant dialogue, and compliance with stakeholders' demands for project properties.	Aims to address all climate- related risk of its properties identified in its materiality assessment by 2030. In 2025, the company targets to have an action plan for exposed buildings.
Increased environmental focus on financial markets	Adverse effect on financing possibilities or higher financing costs due to slow transitioning to lower carbon dioxide dependence	Efforts to increase energy efficiency and reduce carbon dioxide emissions. Overall sustainability focus throughout operations.	Improved ESG reporting, more comprehensive mapping of emissions and property certifications. Obtained green financing from NIB for one of its projects.

OWNERSHIP ANALYSIS

Ownership neutral

We view Intea's broad and diverse ownership structure (see Figure 19) as supportive of the company's overall stability and long-term development. The company's shareholder base is slightly more diverse than previously following its IPO in the fourth quarter of 2024. However, most shares are still controlled by the same institutions and owners as prior to the IPO, providing strategic stability and moderating the company's risk tolerance. We take a positive view of the company's access to equity markets should the need for new equity arise.

Figure 19. Intea ownership structure, 31 Mar. 2025

ISSUE RATINGS

As of 31 Mar. 2025, Intea's gross secured LTV was 13%. We expect Intea to keep its gross secured LTV below 40% on a sustained basis, as the company primarily finances itself using unsecured debt and has restrictions on the issuance of secured debt in its bond documentation (negative pledge). Because of the low degree of prior ranking debt to unsecured debtholders, we expect meaningful recovery for unsecured lenders in the event of financial distress. Accordingly, the rating on Intea's senior unsecured obligations is commensurate with the 'BBB' issuer rating.

SHORT-TERM RATING

The 'N3' short-term rating reflects the company's liquidity profile relative to the 'BBB' long-term issuer rating.

METHODOLOGIES USED
